DETAILED ACTION

In response to the amendment filed 9/19/2002, all the requested changes to the claims have been entered. The amended claims have been carefully reconsidered, however, they are still deemed unpatentable. The previous ground of rejection has been changed in response to the amended claims. Since the amendment necessitated a new ground of rejection, this office action is made final.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mesaki et al (US 6,217,231 B1) in view of Serizawa (US 6,443,630 B1).

Art Unit: 2874

Mesaki et al was cited in the previous office action.

Mesaki et al disclose an optical module comprising a ferrule having a slope end surface supporting an optical fiber penetrated therethrough (Figs. 23c, 23d); a photodetector mounted on the ferrule, and optically coupled directly with the optical fiber (Figs. 23c, 23d); a module substrate supporting the ferrule, and a resin package covering the ferrule so that an end of the ferrule protrudes from the resin package (Figs. 21, 22a); electronic parts mounted on the module substrate (Fig. 21); engagement protrusions extending along side surfaces of the resin package, to be engaged with an optical connector (Fig. 21).

While Mesaki et al teach the mounting of the photodetector on the ferrule surface, they do not teach the mounting of the photodetector on the end surface. On the other hand, Serizawa teaches mounting of the photodetector ('26' or '27' in Fig. 3) directly on the end surface of the ferrule ('36'), which contains optical fiber ('35') therethrough. Serizawa explicitly teaches that such arrangement is advantageous in reducing optical power loss (column 2 lines 11-20).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Mesaki et al device to have photodetector directly attached to the ferrule structure as taught by Serizawa.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 2874

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
